To start off, I had the same problem getting my prints to stick on my new acrylic bed. First thing you need to do is decrease your first layer speed. From the video, you are clearly printing too fast. The plastic needs some time to be laid down on the bed, and if too fast, it would rather stick to the nozzle wiz far hotter than bed.

This is a practical and comprehensive guide to all aspects of writing about science and technology, including both 'how to write' and the practical and commercial aspects of publishing as they affect an author. Special features of technical writing are discussed in detail. It also gives special attention to problems facing writers of instruction manuals in catering for users with a wide range of technical backgrounds.

Based on extensive fieldwork at two well-known commercial publishers of scholarly books, Walter W. Powell details the different ways in which both internal politics and external networks influence decisions about what should be published. Powell focuses on the work of acquisitions editors: how they decide which few manuscripts, out of hundreds, to sponsor for publication; how editorial autonomy is shaped, but never fully curbed, by unobtrusive controls; and how the search process fits into the social structure of the American academy. Powell's observations—and the many candid remarks of publishers and their staffs—recreate the workaday world of publishing. Throughout, the

sociology of organizations and of culture serves as Powell's interpretive framework. Powell shows how scholarly publishers help define what is "good" social science research and how the history and tradition of a publishing house contribute to the development of an organizational identity. Powell's review of actual correspondence, from outside letters proposing projects to internal "kill" letters of rejection, suggests that editors and authors at times form their own quasi-organization with external allegiances and bonds beyond those of the publishing house. "This is a welcome addition to the literature on the life of the organizations that produce our science and our culture. Powell's intimate look at two scholarly publishing companies has an insider's appreciation of the book business and an outsider's eye for questions the editors are not asking themselves."—Michael Schudson, University of California at San Diego "Getting Into Print will long be the book about how academic editors choose the titles they sponsor. Even experienced editors and authors will find new insights here and revealing comparisons with decision-making in other kinds of organizations."—Edward Tenner, Los Angeles Times Book Review "Getting Into Print is an unusually outstanding ethnographic study in that it reflects the evocative richness of detail associated with the ethnographic approach while simultaneously maintaining a clear-headed, analytical distance from the subject that allows for a meaningful theoretical contribution. Powell is an astute ethnographer who presents a vital and compelling 'insider's view' of the decision-making process in scholarly publishing, making this book fascinating reading for all those involved in the 'publish-or-perish' syndrome."—Barbara Levitt, American Journal of Sociology
