In this essay, Tolstoy argues that extreme gap between the Russian aristocracy and peasantry will be unsustainable for the Russian nation.

THE JUNGLE IS NEUTRAL makes The Bridge Over the River Kwai look like a tussle in a schoolyard. F. SPENCER CHAPMAN, the book's unflappable author, narrates with typical British aplomb an amazing tale of four years spent as a guerrilla in the jungle, haranguing the Japanese in occupied Malaya. Traveling sometimes by bicycle and motorcycle, rarely by truck, and mainly in dugouts, on foot, and often on his belly through the jungle muck, Chapman recruits sympathetic Chinese, Malays, Tamils,

and Sakai tribesman into an irregular corps of jungle fighters. Their mission: to harass the Japanese in any way possible. In riveting scenes, they blow up bridges, cut communication lines, and affix plastique to troop-filled trucks idling by the road. They build mines by stuffing bamboo with gelignite. They throw grenades and disappear into the jungle, their faces darkened, their tommy guns wrapped in tape so as not to reflect the moonlight. And when he is not battling the Japanese, or escaping from their prisons, he is fighting the jungle's incessant rain, wild tigers, unfriendly tribesmen, leeches, and undergrowth so thick it can take four hours to walk a mile. It is a war story without rival.

Perhaps the most widely respected of all living space artists and one of the giants in the history of science fiction art, John Berkey has had a long and exceptionally distinguished career. He started as a professional artist in the 1950s, working for various studios before spending eight formative years at Brown & Bigelow, the major calendar-publishing company of the day; there he developed his amazing landscape skills in depicting scenes of Americana and the like. On turning freelance he soon brought those skills

- and his dazzlingly evocative neo-impressionist style - to the field of science fiction. His name is now spoken with reverence and awe by his fellow artists in the field.

While a substantial number of studies have evaluated the effects of merit aid programs, there is a surprising lack of any systematic consideration of how states determine eligibility criteria for these scholarships. The selectivity of merit aid eligibility criteria can be as important as whether or not such programs are adopted. If, for example, merit aid programs have broad, easily-attained initial eligibility criteria, then a large proportion of high school graduates, including low-income and under-represented students, will gain

eligibility. On the other hand, if the criteria are more rigorous, then a smaller proportion of students, likely those already planning to attend and with the means to afford college, will be eligible. Thus, this innovative book - the first to deepen the descriptive and conceptual understanding of the process by which states determine merit aid scholarship criteria - is crucial to understanding merit aid's success and failures at fulfilling the promise of education.
