he authors introduce and study the notions of hyperbolically embedded and very rotating families of subgroups. The former notion can be thought of as a generalization of the peripheral structure of a relatively hyperbolic group, while the latter one provides a natural framework for developing a geometric version of small cancellation theory. Examples of such families naturally occur in groups acting on hyperbolic spaces including hyperbolic and relatively hyperbolic groups, mapping class groups, , and the Cremona group. Other examples can be found among groups acting geometrically on spaces, fundamental groups of graphs of groups, etc. The authors obtain a number of general results about rotating families and hyperbolically embedded subgroups; although their technique applies to a wide class of groups, it is capable of producing new results even for well-studied particular classes. For instance, the authors solve two open problems about mapping class groups, and obtain some results which are new even for relatively hyperbolic groups.

Strategic mobility, the capability to transport military forces rapidly across intercontinental distances into an operational theater, lies at the heart of US military strategy. Nowhere has the importance of strategic mobility been more evident than in Operation Desert Shield/Desert Storm, the military response to the Iraqi seizure of Kuwait that began in August 1990 and ended in March 1991. This study presents a detailed analysis of how the Defense Transportation System (DTS)--the United States Transportation Command, its service components, and the civilian transportation industry--provided the strategic mobility that enabled the United States and its allies to assemble an overwhelming military force to defeat Iraq and free Kuwait. It is also a tribute to the hard work and dedication of the military and civilian personnel who ran the DTS during the operation.

Microbial cell wall structures play a significant role in maintaining cells ' shape, as protecting layers against harmful agents, in cell adhesion and in positive and negative biological activities with host cells. All prokaryotes, whether they are bacteria or archaea, rely on their surface polymers for these multiple functions. Their surfaces serve as the indispensable primary interfaces between the cell and its surroundings, often mediating or catalyzing important interactions. Prokaryotic Cell Wall Compounds summarizes the current state of knowledge on the prokaryotic cell wall. Topics concerning bacterial and archaeal polymeric cell wall structures, biological activities, growth and inhibition, cell wall interactions and the applications of cell wall components, especially in the field of nanobiotechnology, are presented.

Since 1990 the International Workshop on Software Measurement (IWSM) has been celebrated annually in Montr ´ eal (Qu ´ ebec), Canada, and diﬀerent places all over Germany by turns. The Montr ´ eal editions were organized by the Soft- ´ ware Engineering Research Laboratory (GELOG) of the Ecole de technologie ´ sup ´ erieure (ETS) at the University of Qu ´ ebec at Montr ´ eal (UQAM), which is directed by Professor Alain Abran. The German editions were organized 2 jointly by the Software Measurement Laboratory (SMLAB) of the Otto-von- Guericke-UniversityMagdeburg,Germany,whichisdirectedbyProfessorReiner R. Dumke; and the German-speaking user association for software metrics and 3 estimation (DASMA e. V.) . Partially, the editions of IWSM were held jointly with the DASMA Software Metrik Kongress (MetriKon). 4 Organized by an initiative of Jos ´ e Javier Dolado from the University of 5 the Basque Country at San Sebastian and Juan J. Cuadrado-Gallego from the University of Alcal ´ a in Madrid the 7rst edition of the International Conference onSoftwareMeasurement(Mensura) couldbe convenedin C ´ adiz,Spainin 2006. Motivated by this success and with the 7rst edition of Mensura 7nding special approval, the organizers of IWSM and Mensura decided to complement each other and, thus, to organize the next conference edition together. In November 2007, the typical convention month for both conferences, that joint conference was held in Palma de Mallorca, Spain.

This book sheds light on all aspects of earnings claims, including defining what an earnings claim really is, the origins of its regulation under the franchise disclosure laws, how a franchisor should prepare an earnings claim, how a franchisee should use an earnings claim, how a franchisee may attack lawful and unlawful earnings claims, how a franchisor may defend against such attacks, and how the government franchise enforcement authorities, investigate unlawful earnings claim activity.

Community colleges enroll half of the nation ' s undergraduates. Yet only 40 percent of entrants complete an undergraduate degree in six years. Redesigning America ' s Community Colleges explains how two-year colleges can increase their students ' success rate quickly and at less cost, through a program of guided pathways to completion.

Although supercomputer systems are faster, and have larger memory hierarchies than other computer systems, such characteristics merely imply the existence of great potential power. How much of that power can be harnessed productively is the central theme of performance evaluation. A set of methods for evaluating the performance of applications on supercomputers has not yet been rigorously defined. This volume is a compilation of research approaches and techniques that are a promising means to that end. The contributions are grouped into three sections. Contributors to Performance looks at applications, algorithms, compilers, operating systems, and memory issues. Measurements and Metrics addresses some of the current techniques and methods of performance evaluation. Among the topics are: the performance monitoring capabilities of the CEDAR system, the methodology behind the Livermore loops, the empirical analysis of system performance, and a software simulator developed in connection with the RP3 project. Methods, Models, and Directions looks at ways of establishing a general and theoretical framework for supercomputer performance evaluation.
