If you want to apply for a graduate job at Deutsche Bank you need to do so by November 2nd. With this sense of urgency in mind, Deutsche Bank has been pushing its 'Unofficial Guide to Banking', the informal DB take on banking careers which (we believe) has been in existence since circa 2008. It's not clear whether the guide has been updated for the current crop of aspiring bankers, but it contains plenty of illuminative points for anyone wondering how Deutsche (unofficially) sees the world.

[Six learnings from Deutsche Bank's 'Unofficial Guide to](#)

A career in investment banking is one with great prospects. Bankers work in a fast-paced, high pressured environment and are exposed to the highest profile deals that shape the financial markets. Investment banks form a specialist link between people who want to invest their capital and companies that require capital to grow and be successful.

Despite spending enormous amounts of time on core subjects such as math and science, American students are consistently left out when it comes to financial literacy. In the vast majority of the United States, there is virtually no requirement for high school students to acquire skills related to personal finance. This inadequacy has left most students in the dark when it comes to these crucial skills and has consequently jeopardized the financial future of millions. As students transition from primary education to adulthood, these students end up lost and confused with regard to their finances, creating poor habits that can plague them for the rest of their lives. As teenagers who once lacked exposure to financial education themselves, Avaniko Asokumar, Sai Bommineni, and Rohit Chakka hope to reverse this trend through writing this guide. By breaking down complex financial topics from investing in bonds to planning for retirement in a simple and relatable way, the authors hope to provide a rich and deep understanding of personal finance to all readers. The information present in the novel's six major sections: Financial Planning; Banking, Lending, and Credit; Investment Basics; Career-Oriented Finance; End Game Finance; and Miscellaneous Finance, will provide a strong baseline of financial education for readers that they can build on going forward. Ultimately, the authors aspire to provide young readers with practical financial knowledge. By internalizing the concepts presented in this novel, teenagers can leave with skills they will utilize for the rest of their lives.

This book discusses the role of capital markets and investment banking in Nigeria, the largest frontier market economy in the world by both population size and gross domestic product. Offering a systematic framework combining conceptual principles with real practice, the book enables the reader to gain useful insight into how capital markets and investment banking work in the real world of a frontier market. The book provides a synopsis of the economic attractiveness, financial systems intermediation and capital markets, as well as the regulatory framework within a frontier market. It explores capital raising through equity and underwriting and private equity, paying particular attention to putting capital to work on mergers and acquisitions, project and infrastructure finance and real estate finance. Furthermore, it analyses asset management, pension industry and securities trading in a frontier market. The authors use detailed case studies from Nigeria to illustrate the operations of investment banking in frontier markets. The cases, tables and charts serve as useful illustrations of the topics under discussion. With the authors' combined experience of more than 50 years as economists, finance and investment professionals and in executive leadership positions in the financial services industry, this book will interest the academic community, professionals in the financial industry, retail and institutional investors interested in frontier markets, development practitioners in international organizations and policy makers including securities and capital market regulators.

How and why do strategic perspectives of financial institutions differ by class and region? Strategies of Banks and Other Financial Institutions: Theories and Cases is an introduction to global financial institutions that presents both theoretical and actual aspects of markets and institutions. The book encompasses depository and non-depository Institutions; money markets, bond markets, and mortgage markets; stock markets, derivative markets, and foreign exchange markets; mutual funds, insurance, and pension funds; and private equity and hedge funds. It also addresses Islamic financing and consolidation in financial institutions and markets. Featuring up-to-date case studies in its second half, Strategies of Banks and Other Financial Institutions proposes a useful theoretical framework and strategic perspectives about risk, regulation, markets, and challenges driving the financial sectors. Describes theories and practices that define classes of institutions and differentiate one financial institution from another Presents short, focused treatments of risk and growth strategies by balancing theories and cases Places Islamic banking and finance into a comprehensive, universal perspective

The dynamic environment of investment banks, hedge funds, and private equity firms comes to life in David Stowell's introduction to the ways they challenge and sustain each other. Capturing their reshaped business plans in the wake of the 2007-2009 global meltdown, his book reveals their key functions, compensation systems, unique roles in wealth creation and risk management, and epic battles for investor funds and corporate influence. Its combination of perspectives—drawn from his industry and academic backgrounds—delivers insights that illuminate the post-2009 reinvention and acclimation processes. Through a broad view of the ways these financial institutions affect corporations, governments, and individuals, Professor Stowell shows us how and why they will continue to project their power and influence. Emphasizes the needs for capital, sources of capital, and the process of getting capital to those who need it. Integrates into the chapters ten cases about recent transactions, along with case notes and questions Accompanies cases with spreadsheets for readers to create their own analytical frameworks and consider choices and opportunities

The recent growth of credit derivatives has been explosive. The global credit derivatives market grew in notional value from \$1 trillion to \$20 trillion from 2000 to 2006. However, understanding the true nature of these instruments still poses both theoretical and practical challenges. For a long time now, the framework of Gaussian copulas parameterized by correlation, and more recently base correlation, has provided an adequate, if unintuitive, description of the market. However, the increased liquidity in credit indices and index tranches, as well as the proliferation of exotic instruments such as forward starting tranches, options on tranches, leveraged super senior tranches, and the like, have made it imperative to come up with models that describe market reality better. This book, originally and concurrently published in the International Journal of Theoretical and Applied Finance, Vol. 10, No. 4, 2007, agrees that base correlation has outlived its usefulness; opinions of how to replace it, however, are divided. Both the top-down and bottom-up approaches for describing the dynamics of credit baskets are presented, and pro and contra arguments are put forward. Readers will decide which direction is the most promising one at the moment. However, it is hoped that, in the near future, models that transcend base correlation will be proposed and accepted by the market. Sample Chapter(s) Introduction (31 KB) Chapter 1 L(r)vy Simple Structural Models (209 KB) Contents L(r)vy Simple Structural Models (M Baxter), Cluster-Based Extension of the Generalized Poisson Loss Dynamics and Consistency with Single Names (D Brigo et al.), Stochastic Intensity Modeling for Structured Credit Exotics (A Chaposvsky et al.), Large Portfolio Credit Risk Modeling (M H A Davis & J C Esparragoza-Rodriguez), Empirical Copulas for CDO Tranche Pricing Using Relative Entropy (M A H Dempster et al.), Pricing and Hedging in a Dynamic Credit Model (Y Elouerkhaoui), Joint Distributions of Portfolio Losses and Exotic Portfolio Products (F Epple et al.), On the Term Structure of Loss Distributions: A Forward Model Approach (J Sidenius), Readership: Professionals, academics and students in the areas of finance and bank
